WITS Changes – 16.0.0 and 16.1.0 Release (Mental Health)
7/28/2014

In the 16.0.0 and 16.1.0 Releases 6 bugs were repaired in WITS. Below are a summary of the errors and the resolutions of the problems.

1) Claim Item List: Slow Performance Returning Search Results **Resolution**: Implemented database and code changes to improve search performance.

2) Admission: Shouldn't be able to save an Admission with a date prior to Intake date **Resolution**: Fixed an issue where Admission could be saved with an Admission date prior to Intake date. It now throws an error message upon save in this scenario.

3) Client Profile: Error in state code submission causing odd values to be returned **Resolution**: fixed an issue where the address validation was not being narrowed down correctly.

4) Support Ticket: 'End User' drop down box is not being filtered so there are too many in the list **Resolution**: 'End User' drop down box is now being filtered by Agency selected.

5) Reports: Error on running admission data report for large data sets **Resolution**: Fixed an error that could occur when running the Admission Data report for large data sets.

6) Intake: Initial Contact Type dropdown field is empty on Intake screen if the client has more than one Episode Intake **Resolution**: Initial Contact Type dropdown field now has options on Intake screen even if the client has more than one Episode Intake.

The 16.0.0 and 16.1.0 releases were pushed to production on July 28, 2014. When these changes are made in Idaho-Mountain and Idaho-Pacific , the top right portion of your screen will say 16.1.0.
